

# Browsing Products & Place Order

## User

- Initiates the process by visiting the platform to browse products.

## Product Marketplace

- Displays all available products for users to browse.

## Sanity CMS (Fetching Product Data)

- Backend fetches product data from the CMS and displays it in the marketplace.

## Product Detail

- User selects a product to view its detailed information (e.g., price, description, availability).

## Cart

- User adds the desired product(s) to their cart.

## Place Order

- The user proceeds to place an order for the items in the cart.

## Sanity CMS (Verification)

- Verifies if the user is registered and authenticates their information.

## Data Verification

- Validates the user's provided data before finalizing the order.

## **User Information**

- Stores or retrieves user details like name, address, and payment preferences for processing.

## **Sanity CMS (Order Details)**

- Stores and manages the details of the placed order.

## **Order Confirmation**

- Confirms the successful placement of the order and sends confirmation to the user.
